

COMPANY PROFILE

ABOUT US

For over three decades, **Investa Pumps Pvt. Ltd.** has been at the forefront of precision pump manufacturing, delivering engineering solutions that power Indian and global, most demanding industries.

Founded in 1994, we have perfected the art and science of **Investment Casting (Lost Wax Process)** to craft pumps of unmatched quality, performance, and reliability.

Our product line spans stainless steel, cast steel, and super alloy pumps, available in a diverse range of models to suit specialized applications.

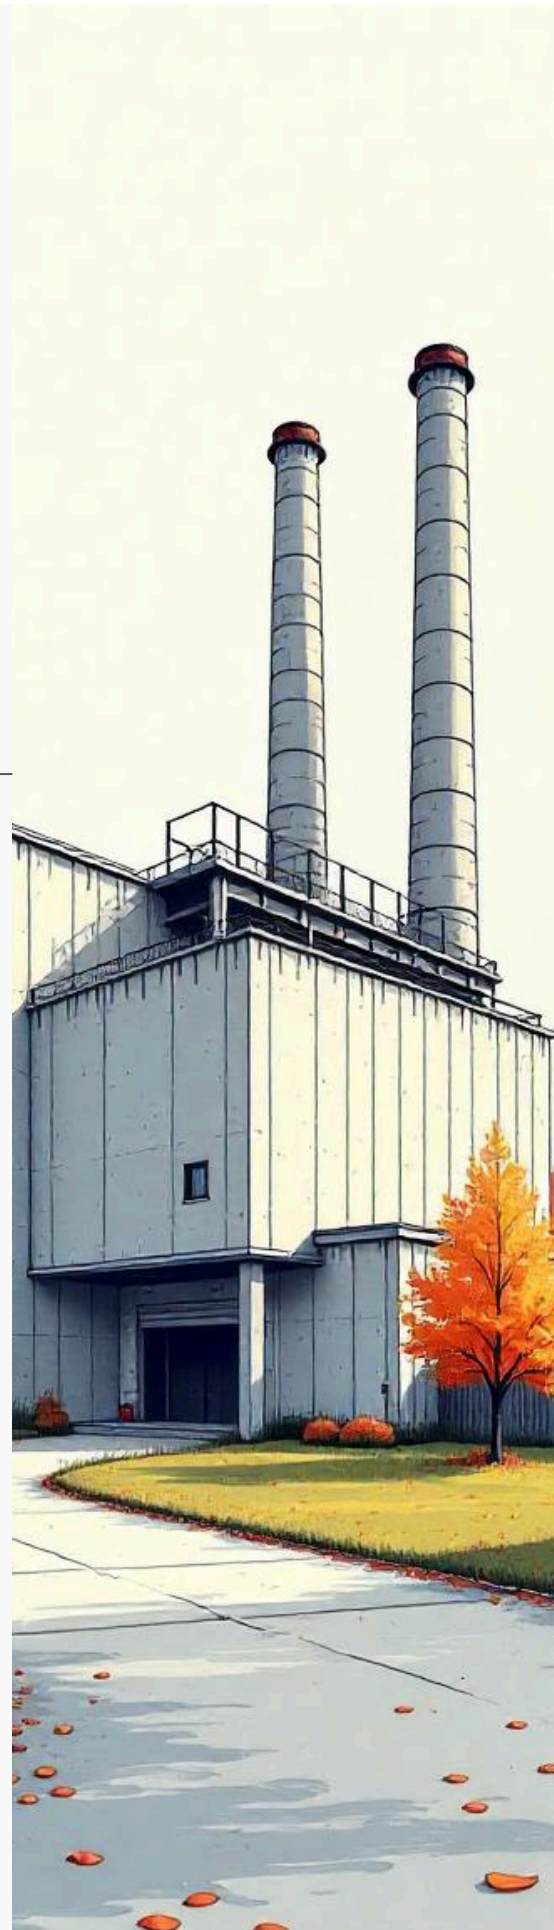

From **centrifugal to centripetal designs**, and from **horizontal to vertical configurations**, every Investa pump is built with precision engineering, ensuring efficiency, durability, and consistent performance.

VISION

"To be a globally trusted innovator in chemical and industrial pump solutions—empowering industries with advanced, reliable, and sustainable fluid-handling systems."

MISSION

"To design and manufacture high-performance, innovative, and material-diverse pumping solutions—backed by engineering excellence, operational agility, and customer centric service — that empower industries worldwide with reliable, sustainable, and custom made fluid-handling systems."

OUR STRENGTHS

01 Network

We operate through a robust network of domestic and international authorised distributors, offering prompt on-site maintenance and comprehensive training to ensure optimal pump performance and customer satisfaction.

02 Human Resources

Our company earns high employee satisfaction, highlighting strengths in promotions, job security, and skill development—backed by a modest but dedicated 100 +workforce.

03 Operational Methods

We utilise precision-driven techniques such as investment casting (lost wax process), back-pull-out designs, interchangeable components, and standardized dimensions to streamline installation, maintenance, and performance optimization.

04 Quality Control (QC) Tests

- Checks for each Parts as per their Dimensional Tolerances.
- Hydrotest of Wet End Components.
- Dynamic Balancing of Impellers.
- Computerised Test Bed for Testing of Flow, Pressure, Efficiency, Motor Power and NPSHr.
- Mechanical Run Tests for Vibration, Temperature and Noise.
- Co-ordinate Measuring Machine.
- Fully Computerised Pump Testing.

INFRASTRUCTURE

Our modern **55,000 sq. feet** pumps manufacturing facility in Gujarat; India enables production of ANSI and ISO series pumps in **80+ models** across diverse materials, delivering efficiency and wide application coverage.

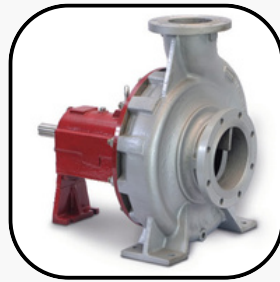

KEY PRODUCTS

We offer an extensive portfolio of **80+** high-performance chemical process pumps, engineered to serve the diverse needs of multiple industries.

With a proven track record of successfully on-time delivering to over **200 domestic and international clients**, we proudly present a curated selection of our most versatile models—trusted for their reliability and efficiency across a broad spectrum of applications.
